## Positioning

I.I.S. Positioning (Real Time Location Tracking) can eliminate hours searching for assets and replacement costs.

Precision tracking utilizing UWB ensures 8" accuracy over a mesh network formed by wireless anchor points.

## Positioning

The anchor points form a dynamic mesh network that communicate with other anchors as well as tracking tags. Anchors may be connected directly to a Power-over-Ethernet (PoE) switch or may be used stand-alone as part of a larger mesh network. The Indoor PoE Anchor device provides UWB coverage over a maximum radius of 164 ft, the anchor provides 8 inch accuracy in two dimensions over its full coverage area.

The Asset Tag is designed for simple attachment to equipment, tools and pallets, and can even be worn by people with a lanyard or clip.

The wearable Badge Tag can track and communicate to your employees, no matter where they are on your site.

Accurate to within 8", the badge operates on ultra-wideband and is capable of detecting and logging the wearer's precise location up to 52 times per second.

## Positioning

The Positioning software resides on a dedicated networked server . When the anchor points transmit real time location data from the tags to the server. Live time up to date location status can be viewed on networked PC's running the Positioning Software or can be accessed by iOS devices on the network using the mobile app.

## Positioning

## Productivity & Efficiency

### Basic Features

- View and search for real time locations
- Reporting-time & attendance, zone occupancy
- Real-time text messaging
- History data playback and heatmap
- Navigation

### Advanced Features

- Advanced Data Analytics
- Route Planning
- File location tagging
